

MANAGING HASANA SYSTEM POLICY

PURPOSE

With the purpose of managing and containing the spread of communicable diseases, the Dubai Health Authority (DHA) launched HASANA, an integrated electronic public health system for disease surveillance and management. The system will integrate all DHA and private health facilities in Dubai, to provide a single immunization record for each individual in all health facilities in Dubai. This integrated disease surveillance and management system linked to school health as it will aid schools in managing student's immunisation and plan and deliver mass immunisation campaigns in school.

HASANA will also improve the productivity of the healthcare staff allowing the providers to direct their efforts fully to the patient's care and provide a smart application to manage and administer school mass immunization campaigns.

AIMS

We aim for our whole school population to be entered in HASANA system with their recent Immunisation schedules.

We aim for parent's compliance in submitting their child's recent vaccination report upon entry or whenever updated.

POLICY

- ✓ Upon school entry, the registrar will collect a copy of student's medical form & vaccination report. If the student is not vaccinated, the parents will need to sign an Immunisation waiver form.
- ✓ The school nurse will enter the immunisation record in HASANA system and generate a HASANA Number to be written on the student's medical book. If a child is a transferee, the school nurse will request the medical book from previous school and will update any immunisation not entered in the system.
- ✓ It is the responsibility of the school nurse to make sure that all immunisation of enrolled students are entered in HASANA otherwise the Immunisation waiver form must be uploaded if the student/parent refuses any kind of vaccine.
- ✓ All mass immunization campaign must be entered/created in the system. The school nurse will create an event and include all students due for vaccination with parental consent.
- ✓ The consent form must be uploaded in the system.
- ✓ Once mass immunization is carried out, the school nurse will need to enter the data of the vaccine given and close the event.
- ✓ The school nurse must attend any training/seminar set by DHA to maintain and utilize the system properly.
